Protocols

Your personal health protocol management system

User Guide · v2.1

SECTION 01

Getting Started

Protocols helps you organize, schedule, and track your entire health stack — supplements, medications, therapies, peptides, nutrition, and exercise — in one place.

Create Your Account

1. **Sign Up** — Enter your name, email, and password to create an account.
2. **Set Location** — Add your city for UV-based sunscreen guidance.
3. **Build Stack** — Browse the catalog, use AI recommendations, or run the guided wizard.

Your Five Tabs

The app is organized around five main views, accessible from the bottom tab bar.

Today

Your daily action plan — what to take, when, and what's done.

Protocols

Browse the catalog, manage your items, and build protocol stacks.

Exercise

Workout routines, weekly regimes, live session logging, and stats.

Nutrition

Macro profiles, named diets, elimination phases, and food rules.

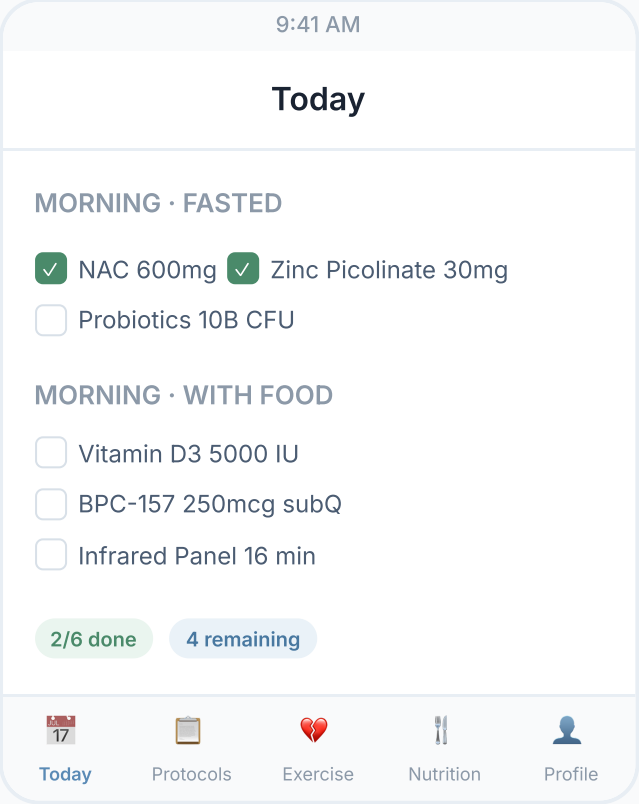
Profile

Your account, preferences, AI settings, and gym locations.

SECTION 02

Today — Your Daily Plan

Every morning, Protocols generates a personalized daily plan based on your active supplements, medications, therapies, peptides, exercise regime, and nutrition cycle.



Time Windows

Your day is divided into scheduling windows. Each item appears in the window you assigned during setup.

Morning Fasted	Before your first meal
Morning w/ Food	With breakfast
Midday	Around lunch
Afternoon	Post-lunch block
Evening	With dinner
Bedtime	Before sleep

💡 Swipe between dates using the date header at the top of the Today screen. You can look back at any past day to review adherence.

Smart Cards on Today

⚠️

Interaction Warnings

Flags supplement and medication interactions based on AI profiles with severity levels.

☀️

Skincare Guidance

UV index and sunscreen reminders based on your saved location.

📈

Tracking Summary

💪

Today's Workout

14-day adherence trend showing your consistency over time.

Your exercise regime's scheduled routine for the day with a quick-start button.

Safety Check

AI-powered supplement safety analysis with evidence-based severity ratings.

Stack Score

A 0–100 score evaluating your overall protocol quality, synergies, and gaps.

Skip with Reason

Log why you skipped an item — ran out, forgot, felt unwell, traveling, or add your own reason.

Batch Mark All

One tap marks every pending item in a time window as taken. Speed through busy mornings.

SECTION 03

Protocols — Your Health Stack

The Protocols tab is your command center for managing supplements, medications, therapies, peptides, and protocol stacks.

Six Pillars

Everything in your health stack falls into one of six categories:

Supplements

Vitamins, minerals, adaptogens, and nutraceuticals with AI-generated profiles covering dosing, timing, interactions, and synergies.

Medications

Prescription and OTC medications including topicals. Track dosage, frequency, and monitoring notes.

Therapies

Devices, treatments, and routines — from cold plunges and saunas to meditation, skincare, and training sessions.

Peptides

Research peptides with route tracking (subQ/IM/topical), reconstitution guides, storage notes, and cycling protocols.

Nutrition

Named diets, macro profiles, elimination phases, cut/bulk cycles, and fasting patterns.

Exercise

Workout routines, weekly regimes, live session logging with per-set tracking, progress stats, and GPS gym locations.

Therapy Categories

Therapies span a wide range of health domains, organized by category:

Thermal

Light

Movement

🌬️ Breathwork	⚡ Electrical	🫶 Manual
🎵 Sound	✨ Skincare	💇 Haircare
🩹 Recovery	🧠 Cognitive	● Other

How to Add an Item

1. **Browse**
   Search the catalog or scroll categories on the Protocols tab.

→

2. **View Profile**
   Tap an item to see its AI-generated profile with dosing, timing, and interactions.

→

3. **Add & Schedule**
   Tap "Add to My Stack" and configure your personal dosage, frequency, and time window.

📦 **Refill Request:** Mark supplements as out of stock, then generate a shareable refill list with dosages and timing — perfect for reordering or sharing with a provider.

SECTION 04

Protocol Stacks

Group related items into named stacks for organized protocol management.

What Are Stacks?

A protocol stack is a named collection of supplements, medications, therapies, and peptides that work together toward a specific goal.

📚 Sleep Stack

Magnesium Glycinate + Ashwagandha + Muse Meditation + Box Breathing

Active

💪 Performance Stack

Creatine + BPC-157 + Zone 2 Cardio + Compression Boots

Active

✨ Skin Protocol

Retinoid + LED Face Mask + Gua Sha + Microneedling + Infrared Panel

Scheduled

👨‍🦲 Hair Protocol

Finasteride + Minoxidil + Dermaroller Scalp + LED Hair Cap

Active

✓ **Tip:** Items can belong to multiple stacks. Your "Morning Fasted" supplement might appear in both your Sleep Stack and your Performance Stack.

Stack Activation

Stacks can be **active** (items show in your daily plan), **scheduled** (will activate on a future date), or **inactive**. Toggle stack status to quickly enable or disable entire protocols without losing your configuration.

SECTION 05

AI-Powered Profiles

Every supplement, medication, and peptide in the catalog includes a detailed AI-generated profile to help you make informed decisions.

What's in a Supplement Profile?

SECTION	WHAT IT TELLS YOU
Mechanism	How the substance works in your body at a biochemical level.
Dosages	Typical dose ranges for different goals (maintenance, deficiency, performance).
Timing	Best time windows, whether to take with food, and what to avoid.
Interactions	Known interactions with medications and other supplements with severity levels.
Synergies	Beneficial pairings and why they work better together.
Cycling	Whether periodic breaks are recommended and suggested patterns.
Safety	Contraindications, side effects, and safety considerations.
Evidence	Quality rating (strong/moderate) with key research citations.

Therapy Session Templates

Each therapy includes a session template with recommended duration, frequency, and step-by-step instructions. Customize session settings when you add a therapy to your stack.

🧊 Cold Plunge

Default: 5 min · Daily · Morning
Template: 2-5 min full immersion at 3-7°C

💡 Infrared Panel

Default: 16 min · Daily · Morning
Template: 4 min per side or 5 min front-only block

SECTION 06

Exercise Tracking

Plan workouts, log sessions in real time, and track your progress with detailed per-exercise statistics.

Build Workout Routines

Create named routines from the exercise catalog of 80+ exercises across compound, isolation, bodyweight, cardio, olympic, and flexibility categories.

🏋️ Push Day

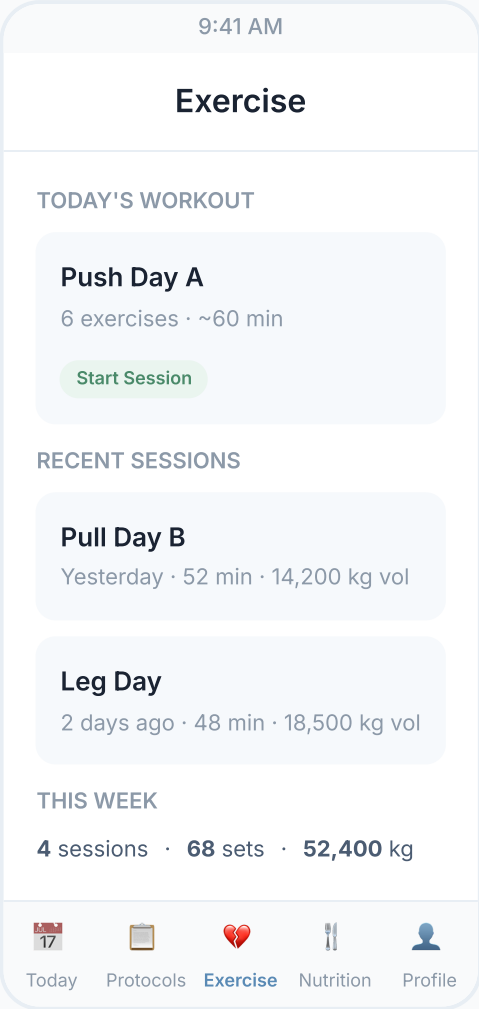
Bench Press · OHP · Incline DB · Lateral Raise · Tricep Pushdown · Cable Fly

~60 min

💪 Pull Day

Deadlift · Barbell Row · Pull-Ups · Face Pull · Bicep Curl · Hammer Curl

~55 min



Weekly Regimes

Organize routines into a weekly schedule. Choose Push/Pull/Legs, Upper/Lower, or any custom split. Your active regime determines which workout appears on the Today screen each day.

Live Session Logging

Start a session from a routine template or go ad-hoc. Log every set with weight, reps, RPE (1–10), and notes. Mark warm-up and drop sets separately.

📈

Volume Tracking

📊

Muscle Distribution

📍

Gym Locations

Total volume (weight × reps), max weight, and estimated 1RM per exercise.

Volume breakdown by muscle group across chest, back, shoulders, arms, and legs.

Save GPS locations for your gyms. When you arrive, the app auto-suggests your routine.

Pause & Resume

Leave mid-workout and pick up where you left off — timer and logged sets are preserved.

SECTION 07

Nutrition Plans

Create and track macro profiles, named diets, elimination phases, and custom food rules alongside your supplement and therapy protocols.

Nutrition Cycle Types

🍆

Standard Diet

Set daily macro targets (protein, carbs, fat) and caloric goals.

🔥

Cut / Bulk

Caloric surplus or deficit phases with target macros and duration.

🔬

Elimination

Track food sensitivities with systematic elimination and reintroduction.

Phase Tracking

Nutrition plans appear in the Today screen's nutrition phase card, showing your current cycle status, days remaining, and macro targets. The app tracks active vs. completed cycles so you can review your nutrition history.

SECTION 08

AI-Powered Features

Claude-powered intelligence helps you build, evaluate, and optimize your health stack.

Smart Recommendations

Tell the AI your goals and constraints. It ranks supplements from the catalog by evidence quality, goal alignment, and synergy with your current stack.

1. **Set Preferences** — Define your goals, max daily items, excluded ingredients, and focus concerns.
2. **Get Picks** — AI proposes slot-constrained recommendations ranked by evidence and relevance.
3. **Add to Stack** — Review each recommendation and add the ones you want to your protocol.

Guided Wizard

A conversational AI wizard that asks about your health goals, lifestyle, and constraints, then builds a complete protocol for you.

Conversational

Chat-style Q&A that adapts follow-up questions based on your answers.

Full Protocol

Outputs a complete stack with dosages, timing, and cycling — ready to activate.

Stack Score

A 0–100 quality score that evaluates your current protocol for synergies, gaps, redundancies, and goal alignment. Higher scores indicate a well-balanced, evidence-backed stack.

Safety Check

AI analyzes your active items for potential interactions, contraindications, and dose concerns. Issues are rated critical, moderate, or informational with specific guidance.

SECTION 09

Adherence Tracking

Monitor your consistency and build healthy habits with built-in adherence tracking.

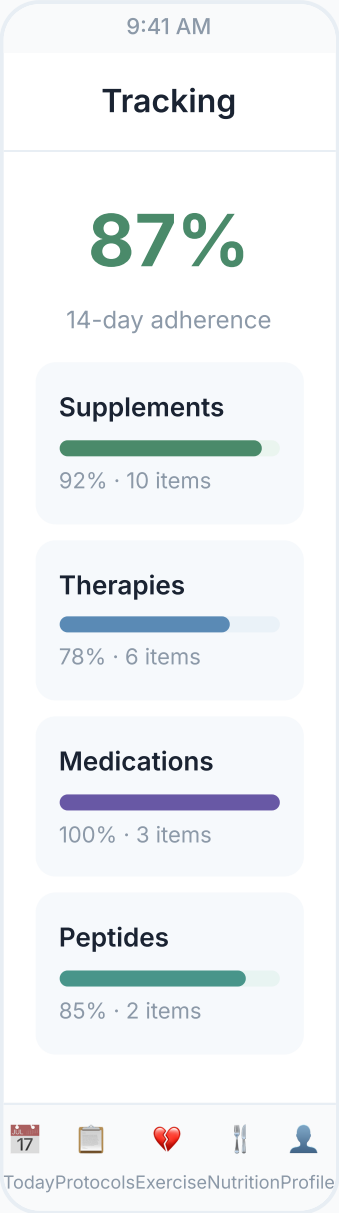
How Tracking Works

When you check off an item in your daily plan, an adherence event is recorded with a timestamp. The tracking summary card on Today shows your rolling 14-day adherence rate.

> 📊 Tap the tracking summary card to see a detailed breakdown of adherence by item, category, and time window.

Cycle Alerts

For supplements with cycling recommendations (like Ashwagandha's 8-on/2-off pattern), the app tracks your cycle position and alerts you when it's time to take a break or resume.



SECTION 10

Profile & Settings

Manage your account details, preferences, AI interaction mode, and gym locations.

Your Profile

Location & UV

Save your location to receive UV index-based sunscreen guidance on the Today screen.

Notifications

Configure reminders for supplement timing, therapy sessions, and cycle alerts.

Account

Update your name, email, and password. Sign out or manage your session.

Preferences & AI Mode

Configure constraints that drive recommendations and AI-assisted features:

Goals & Concerns

Set primary goals (longevity, cognitive, sleep) and free-text focus concerns to guide AI picks.

Budget Constraints

Max supplements per day, max tablets, excluded ingredients, and exercise blocks per week.

INTERACTION MODE	DESCRIPTION
Expert	Full manual control, all parameters exposed
Advanced	AI assists with onboarding and profiles, you drive selection
Automated	AI proposes complete protocols, you approve or tweak
Guided	Wizard Q&A: AI asks constraint questions, builds your entire stack

⚠️ **Important:** Protocols is a personal tracking tool, not medical advice. Always consult a healthcare professional before starting, stopping, or modifying any supplement, medication, or therapy regimen.

SECTION 11

Quick Reference

Common actions at a glance.

I WANT TO...	HOW
See what to take today	Open the **Today** tab
Add a new supplement	Protocols tab → search or scroll → tap item → **Add to My Stack**
Change a dosage or schedule	Protocols tab → My Items → tap item → **Edit Schedule**
Create a protocol stack	Protocols tab → Stacks section → **+ New Stack**
Mark an item as done	Today tab → tap the checkbox next to the item
Check my adherence	Today tab → scroll to **Tracking Summary** card
Set up a nutrition plan	Nutrition tab → **+ New Plan**
Check UV / sunscreen need	Today tab → **Skincare Guidance** card (requires location)
Pause a supplement	Tap item → toggle **Active** off (keeps your schedule saved)
Flag item as out of stock	Tap supplement → toggle **Out of Stock**
See interaction warnings	Today tab → **Interaction Warnings** card (auto-generated)
Review a past day	Today tab → tap date header → navigate to desired date
Start a workout	Exercise tab → tap today's routine → **Start Session**
Create a workout routine	Exercise tab → Routines → **+ New Routine**
Set up a weekly regime	Exercise tab → Regimes → **+ New Regime** → assign routines to days
Log a set during workout	Active session → tap exercise → enter weight, reps, RPE
Check exercise progress	Exercise tab → **Stats** → view volume, max weight, muscle distribution
Save a gym location	Profile tab → **Gym Locations** → **+ Add Gym**
Get AI recommendations	Profile tab → Preferences → **Get Recommendations**
Run the guided wizard	Profile tab → Preferences → **Start Guided Wizard**
Check my stack score	Today tab → **Stack Score** card
Run a safety check	Today tab → **Safety Check** card

I WANT TO...	HOW
Add a peptide	Protocols tab → Peptides → tap item → **Add to My Stack**
Skip an item with a reason	Today tab → tap item → **Skip** → select reason
Mark all items in a window	Today tab → time window header → **Mark All**
Generate a refill list	Any supplement → mark **Out of Stock** → Protocols tab → **Refill Request**
Resume a paused workout	Exercise tab → **In Progress** session → **Resume**

Built with care. Not medical advice. Always consult your healthcare provider.
